

MAKOLEKOLE - How and why we make borehole water wells.

This is how thousands of people in the remotest parts of Zambia's Luangwa Valley collect their water.

A community is identified.

Mobilising from our base in the Valley

Meeting some water carriers along the way

Drilling in action

The whole community lends a hand – the borehole casings going in, it usually takes around a week to complete including the concrete surround and soakaway.

Clean, fresh water for the first time in the village

Everyone enjoys the pump testing

Happy customers.

Completed borehole and village committee.

**A community of up to 200 men, women and children now, instead of travelling miles to dangerous rivers or scooping dirty water from shallow wells, has access to clean, safe water for life.**

**MAKOLEKOLE – MANZI NDI MOYO - CLEAN, FRESH WATER FOR LIFE**
